

# The new exhaust extraction system for emergency vehicles

## Nederman PTS – total fleet flexibility

Pneumatic Track System – PTS, the new Nederman exhaust extraction system for emergency vehicles offers full fleet flexibility and safety. A perfect solution for stations where vehicles varies from time to time. The system has nozzle expanded by compressed air, fixing and sealing the nozzle

tightly round the tail pipe. PTS is supplied with a choice of two different sized nozzles to suit any tail pipe dimension. A quick coupler makes it easy to interchange the nozzles.

**Air vent for quick and safe getaways:** *The air pressure in the nozzle is released quicker than in similar systems.*

**Grip for ergonomical handling** *For easy attachment of the nozzle to the tail pipe.*

**Safety coupling:** *Ensures that the hose is not pulled off its mount in case of faulty operation.*

**Exhaust hose with integrated compressed air hose:** *Is well protected inside the exhaust hose.*

**Fan activation options:** *Pressure sensor, radio control unit or manual switch.*

### ***Whatever your needs, Nederman has the solution***

*Besides PTS Nederman we offer the MagnaSystem line with extraction efficiency second to none.*

*No matter what the size of your station or frequency of emergency callouts – we can provide an exhaust extraction solution based on the market's widest range of products and systems.*

*See them all on our website.*
